Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1) Listing of Claims:

Claim 1 (Currently amended)

Original Claim: A network game system implemented over a wireless data network, enabling real time simultaneous game sessions of multiple players, said system comprised of:

At least one network server for managing and controlling games sessions, including the core game application wherein parallel sessions of the game are preformed simultaneously;
At least two wireless devices having a first transceiver enabling wireless connection to the server (TCP/IP connection, iMode, FOMA, Wi-Fi technologies).

Amended Claim: A network game system implemented over a wireless data network, enabling real time simultaneous game sessions of multiple players, said system comprised of:

At least one network server for managing and controlling games sessions, including the core game application wherein parallel sessions of the game are preformed simultaneously;
At least two wireless devices having a first transceiver enabling wireless connection to the server (such as: TCP/IP connection, iMode, FOMA, Wi-Fi technologies connection).

Claim 2 (Currently amended)

Original Claim: The system of claim 1 wherein the wireless device further includes a second transceiver enabling short range communication with other wireless devices (Bluetooth, infrared, USB/USB2.0).

Amended Claim: The system of claim 1 wherein the wireless device further includes a second transceiver enabling short range communication with other wireless devices (such as: Bluetooth, infrared, USB/USB2.0).

Claim 3 (Previously presented)

The system of claim 2 further comprising game console devices communicating with the wireless devices or directly connected to the backbone network.

Claim 4 (Previously presented)

The system of claim 1 wherein the network servers include a players' database which comprises profile data and history data of players' activities.

Claim 5 (Previously presented)

The system of claim 1 wherein the network server (or the wireless device) further comprises location base module enabling to identify real location of each user wherein the virtual game location is changed in the relation to the real location.

Claim 6 (Previously presented)

The system of claim 2 further comprising real entities at predefined locations wherein said interaction with player (such as buying credit) can affect the virtual game activities (such as gaining power) according to pre-defined rules.

Claim 7 (Previously presented)

The game system of claim 1 further comprising a base station, and a game server, wherein the cellular network interconnects the base station and the game server, and wherein the mobile phone communicates with the game server via the base station utilizing the first transceiver.

Claim 8 (Previously presented)

The game system of claim 1 wherein the network server may support one of the following services: SMS, email, MMS, video.

Claim 9 (Previously presented)

The game system of claim 1 wherein the system further includes behavior analysis for predicting the user's next moves and providing the user with the respective data in advance for improving the system's performance.

Claim 10 (Previously presented)

The game system of claim 1 wherein the users are divided into groups, each group having a specific IP range.

Claim 11(Currently amended)

Original Claim: The game system of claim 1 may also use HSDPA (High speed Downlink Packet Access) technology.

Amended Claim: The game system of claim 1 ~~may~~ has the ability to use HSDPA (High speed Downlink Packet Access) technology.

Claim 12 (Currently amended)

Original Claim: The game system of claim 1 further enabling players to talk on the phone while playing the game—Multi-access allows subscribers to communicate by voice while simultaneously using packet transmissions.

Amended Claim: The game system of claim 1 further enables players to communicate on the phone while playing the game.

Claim 13 (Previously presented)

The game system of claim 1 further enabling players to create communities based on game activities.

Claim 14 (Previously presented)

The game system of claim 1 wherein the wireless device includes a touch sensitive interface for playing the game.

Claim 15 (Previously presented)

The game system of claim 1 wherein the wireless device includes voice operated interface for playing the game.

Claim 16 (Previously presented)

The game system of claim 1 wherein the wireless device includes display screen including one of the following technologies: touch screen or 3D imaging.

Claim 17 (Previously presented)

The game system of claim 1 wherein the wireless device includes a speaker and microphone.

Claim 18 (Previously presented)

The game system of claim 1 wherein the wireless device includes a camera.

Claim 19 (Previously presented)

The game system of claim 1 wherein the game continues uninterrupted, while at least one user is in offline mode enabling the user to return to online mode at any time and to continue the game with no effect on user's or other players' game experience

Claim 20 (Previously presented)

The game system of claim 17 wherein the system provides the users with information status of other players.

Claim 21 (Previously presented)

The game system of claim 1 wherein at least one device is selected by the server enabling said device to function as mirror of the server for a specific group of players, allocating said device the highest priority.

Claim 22 (Previously presented)

The system of claim 21 wherein said device distributes the commands of the main server to all group members.

Claim 23 (Previously presented)

The system of claim 21 wherein the server switches the role of the selected device between the devices of different users using a round-robin technique.

Claim 24 (Previously presented)

The system of claim 21 wherein the server switches the role of the selected device between the devices of different users randomly.

Claim 25 (Previously presented)

The system of claim 1 wherein server postpones the delivery of user command for a short interval of time until receiving commands from the other players, processes it, and distributes the result of the respective actions simultaneously to all the players.

Claim 26 (Previously presented)

The system of claim 1 wherein the server sends only the changes in the display of the screen from the last action of the game

Claim 27 (Previously presented)

The system of claim 1 further Implementing Artificial Intelligence (AI) technology into the game for anticipating at least one user's next move, enabling preloading of data in accordance with user expected move.

Claim 28 (Previously presented)

The system of claim 1 wherein the server uses the processing power of the local mobile device for processing data.

Claim 29 (Previously presented)

The system of claim 1 further comprising stationary game interfaces, wherein user using said interface are enable to participate within the network game.
